About me

Even though I am only starting my career in I.T. I have some engineering background I gathered during my work in Germany - where on daily bases I have been working with AutoCAD. For the past 9 months I have been building up my skills by practicing coding skills with the help of befriended Full Stack specialist who have explained to me what I should know to be useful and successful in current software market. I would describe myself as a person who enjoys a challenge.

Education

ISTQB Certification, in progress
